# Joomla Enable SEF

To enable SEO for your Joomla site:

- Login to administration (i.e. <https://domain.tld/administration>)
- In the top left click on System and then Global Configuration

- In the SEO Settings section enable “Search Engine Friendly URLs” & “Use URL Rewriting”

## SEO Settings

|                                  |   |
|----------------------------------|---|
| Search Engine Friendly URLs      | <input checked="" type="radio"/> Yes <input type="radio"/> No |
| Use URL Rewriting                | <input checked="" type="radio"/> Yes <input type="radio"/> No |
| Adds Suffix to URL               | <input type="radio"/> Yes <input checked="" type="radio"/> No |
| Unicode Aliases                  | <input type="radio"/> Yes <input checked="" type="radio"/> No |
| Include Site Name in Page Titles | <input type="text" value="Before"/>                           |

- Enabling “Adds Suffix to URL” will add .html to most pages (this will depend on the MIME type),

for example <https://domain.tld/index.html> or <https://domain.tld/index.php>

- Enabling “Unicode Aliases” will use the exact text in the alias of each object instead of using transliteration for non ANSI aliases.
- Final step for this to work you need to rename the file htaccess.txt to .htaccess in the root of your web folder.

```
mv htaccess.txt .htaccess
```
