IPv4 Allocation

Shared Hosting

We will not provide a dedicated IPv4 to any shared hosting account. Each account receives a free dedicated IPv6 that will be enabled 24 hours after the account is setup.

VPS

We will only allocate 1x IPv4 and 1x IPv6 to each VPS. We will not provide additional IPv4 addresses for any reason on a VPS. If an address is needed for VPS communications we will provide you with a /24 private range over a VLAN that will allow your VPS's to communicate internally. Traffic over that VLAN is not counted over your monthly bandwidth allocation.

Dedicated

We will provide up to a /29 for a dedicated server upon justification. Please note that the IPs will be monitored 24/7 for illegal use and will be terminated without notification at any point.
