[mariadb](#), [mysql](#), [centos](#), [guide](#)

Difficulty

Very easy

MariaDB 10.3+

Goal

Install MariaDB in Centos 7

Steps

Create Repository

```
vim /etc/yum.repos.d/MariaDB.repo
```

Repo File

```
# MariaDB 10.3 CentOS repository list - created 2019-01-21 09:41 UTC
# http://mariadb.org/mariadb/repositories/
[mariadb]
name = MariaDB
baseurl = http://yum.mariadb.org/10.3/centos7-amd64
gpgkey=https://yum.mariadb.org/RPM-GPG-KEY-MariaDB
gpgcheck=1
```

Install MariaDB

```
yum install -y mariadb mariadb-server
```

Enable & Start MariaDB

```
systemctl start mariadb
systemctl enable mariadb
```

Finalise Installation

mysql_secure_installation
